In conformity with Article 22(3) of the Cape Town Convention "international interest" in this certificate denotes an interest which the creditor has acquired or intends to acquire and is not intended to indicate whether what is registered is an international interest or a prospective international interest. Similarly, with reference to Article 19(4) and 19(5) of the Cape Town Convention, "assignment" is not intended to indicate whether what is registered is an assignment or a prospective assignment, and, in conformity with Article III of the Aircraft Protocol, "sale" is not intended to indicate whether what is registered is a sale or a prospective sale.

The International Registry system is designed to use percentages with a maximum of six decimal places when recording fractional and partial interests in aircraft objects e.g. 12.123456%. Please consider that certain fractions cannot be fully represented within six decimal places. Percentages shown are of the full aircraft object.

Engine Shipment by train is forbidden:

- Engine Shipping Stands are not qualified to protect engines during shipment by train
- « Engine on Shipping Stand » assembly installed on a trailer bed parked on a train is not qualified
- If an engine has been shipped by train, contact CFM Customer Support Center in order to get CFM recommendations

Do not transport a CFM56 engine by train

7 – Engine Shipping Environment Protections

7 – Engine Shipping Environment Protections

Engine must be protected against environment:

- Engine Shipping conditions expose the engine to the environment:
 - Moisture, water ingestion and weather conditions
 - Sand, dust and foreign objects ingestion
- Environment may have an adverse impact on the engine hardware:
 - Corrosion on engine Bearing parts which may lead to spalling/failure
 - Sand and dust ingestion, which may lead to engine damage
- CFM recommendations as described in the next pages:
 - To follow Preservation/Storage tasks requirements
 - To put an adequate Shipping Cover all over the engine

During engine transportation, comply with Preservation/Storage tasks and put adequate cover all over the engine.

7 – Engine Shipping Environment Protections

Engine Preservation/Storage requirements during shipment:

- Protection of engine hardware:
 - Oil wetted parts, including Bearings
 - Fuel wetted parts
 - Engine Gaspath hardware
- Several Preservation/Storage tasks adapted to each duration:
 - Short periods: up to 30 days
 - Long periods: up to 90 days (Boeing & Airbus AMM only), up to 365 days
- CFM mostly recommends to follow Preservation/Storage tasks for long period because:
 - It deals with Oil wetted parts protection (and Fuel wetted parts if 365 days preservation procedure applied)
 - It gives the best protection for Gaspath (Desiccant Bags, Vapor Barrier Film)
 - It prevents any delay that may occur during Transportation

Long period preservation tasks are recommended

7 – Engine Shipping Environment Protections

Engine Shipping Covers (1/2):

- Covers CFM requirements:
 - To be waterproof
 - To be installed over the whole engine
 - To be « tight-fitted » to the engine
 - Must not be attached in any manner to the trailer bed or to the base of the Shipping Stand
- CFM covers are specifically designed:
 - To adapt to Bare engines or QEC'd engines installed on Shipping Stands
 - To avoid water retention (for last versions)
 - To provide easy access to inlet and exhausts for desiccant bags and humidity indicator inspection
 - To be removable without need of sharp/cutting tools
 - To be fully re-usable

CFM56 engines must be covered during shipment

8 - Improper Transportation Disposition

8 - Improper Transportation Disposition

- Improper Transportation is defined as non-compliance with AMM/ESM procedures
- It may have an adverse impact:
 - On main engine bearings
 - On fuel and oil external pipes, brackets, controls and accessories

In case of Improper Transportation,
Contact CFM

8 - Improper Transportation Disposition

- Minimum information to provide to CFM:
 - CFM56 engine model and ESN
 - Description of the deviation with general and detailed pictures of the improper transportation issue and evidences
 - Shipping Stand model: Base P/N and Cradle P/N
 - Shipping Stand Shock Absorbers status
 - Truck and trailer suspension type: “Air ride” (Pneumatic) or not.
 - Shipping Stand attachment pictures (must be sufficient to determine attachment configuration, tie-down points used, straps or chains position)
 - Engine improperly transported going to airline for return to service or going to shop visit ?
 - If going to Shop Visit : workscope to be applied on the engine

The more detailed the information is,
the more appropriate CFM recommendations will be.
